Cochrane Handbook for Systematic Reviews of Interventions Julian P. T. Higgins 2008-11-24
Healthcare providers, consumers, researchers and policy makers are inundated with unmanageable amounts of information, including evidence from healthcare research. It has become impossible for all to have the time and resources to find, appraise and interpret this evidence and incorporate it into healthcare decisions. Cochrane Reviews respond

to this challenge by identifying, appraising and synthesizing research-based evidence and presenting it in a standardized format, published in The Cochrane Library (www.thecochranelibrary.com). The Cochrane Handbook for Systematic Reviews of Interventions contains methodological guidance for the preparation and maintenance of Cochrane intervention reviews. Written in a clear and accessible format, it is the essential manual for all those preparing, maintaining and reading Cochrane reviews. Many of the principles and methods described here are appropriate for systematic reviews applied to other types of research and to systematic reviews of interventions undertaken by others. It is hoped therefore that this book will be invaluable to

All of Statistics Larry Wasserman 2013-12-11
Taken literally, the title "All of Statistics" is an exaggeration. But in spirit, the title is apt, as the book does cover a much broader range of topics than a typical introductory book on mathematical statistics. This book is for people who want to learn probability and statistics quickly. It is suitable for graduate or advanced undergraduate students in computer science, mathematics, statistics, and related disciplines. The book includes modern topics like non-parametric curve estimation, bootstrapping, and classification, topics that are usually relegated to follow-up courses. The reader is

presumed to know calculus and a little linear algebra. No previous knowledge of probability and statistics is required. Statistics, data mining, and machine learning are all concerned with collecting and analysing data.

Previous schools had taken place in The Hague (The Netherlands) in 1966, Leuven (Belgium) in 1967, Konstanz (Germany) in 1972 and in Oxford (Great-Britain) in 1976. This is an important activity of the European Association and has always met with great success. This time, 130 applications were received while only 50 could be accepted, given the format adopted for the Summer School. They represented many different countries and institutions. To fully understand the aims of such a Summer School, especially of the present one, it is probably best to consider first its organization. Participants were graduates or young postdoctoral students in experimental social psychology. For three

weeks they worked in five teams of ten participants each under the mentorship of a senior researcher. Each of five staff members had suggested a special topic of study in which they were interested, well before the start of the session. This enabled the teams to be determined early enough for the participants to be able to prepare for the sessions. In Aix, in the magnificent surroundings of an old convent, afternoons (and often evenings as well) were spent discussing theoretical issues arising from the suggested topics and in planning research to test specific hypotheses.
